SECOND QUARTER HIGHLIGHTS

Global economies continue to grow.

International equity outperforms domestic equity.

A strong U.S. equity market sees earnings improve.

The U.S. bond market adapts to interest-rate normalization.

MARKET UPDATE

The first half of 2017 brought predominantly positive returns for the markets – and Freedom portfolios. In the United States, a strong equity market saw earnings improve, helping to justify prices for large-cap stocks. Overseas, earnings improved even more as developed and emerging economies continued to grow. International equity outperformed domestic equity, aided by a decline in the value of the dollar that boosted exchange rates for U.S. investors. The U.S. Federal Reserve continued on its steady course toward interest-rate normalization – a reflection of economic stability – in raising its federal funds rate 0.25% in each of the first two quarters of 2017. While short-term rates increased, intermediate and long-term rates actually came down, providing additional return for investors.

EQUITY

Domestic Equity

The S&P 500 index, which measures U.S. large-cap equity, returned 3.09% in the second quarter, its seventh consecutive quarter with positive returns. Three major U.S. stock indices reached new closing highs during the quarter. On May 15, the S&P 500 closed above 2,400 for the first time. On June 2, the NASDAQ topped 6,300. And on June 19, the Dow Jones Industrial Average closed at 21,528.99.

Midway through 2017, another positive trend is developing: improved earnings. Corporate earnings drive equity markets over time. Year over year, S&P 500 earnings grew 13.8% in the first quarter of 2017. Revised...
estimates call for approximately 6.5% growth in the second quarter and nearly 10% for the year. The AMS Investment Committee (IC) has been watching for earnings to improve as a sign the rising prices of U.S. large-cap stocks are supported not merely by accommodative monetary policy or investor sentiment, but sound fundamentals.

**International Equity**

For the third time in the past four quarters, international equity outperformed domestic equity. International developed markets – countries with established economies such as the United Kingdom, Germany or Japan – returned 6.12% for the quarter, as measured by the MSCI EAFE index. Emerging markets – countries or regions with still-maturing economies such as China – returned 6.27%, as measured by the MSCI Emerging Markets index.

These markets benefited from economic growth and improved earnings – stronger even than in the United States. The declining value of the dollar in the second quarter also aided returns for U.S. investors holding international equities, as exchange rates from foreign currencies were largely favorable. Politics might also have been a factor, as France elected a president viewed as pro-Europe and the United Kingdom declined to provide the Conservative party with the mandate it sought, likely diminishing the chances of a “hard Brexit” as the U.K. negotiates its withdrawal from the European Union.

Since March 2009, the S&P 500 index has returned 293.52%, nearly double the MSCI EAFE and MSCI Emerging Markets indices, which returned 140.72% and 147.48%, respectively, over the same time period. Recent outperformance from international and emerging markets, however, reinforces the importance of diversification across equity markets for long-term investing.

**Equity Returns**

![Equity Returns Chart](image)

**Freedom Portfolio Positioning**

The AMS IC holds a slightly favorable view of international equity, based on its attractive valuations – including price-to-earnings valuations – strong earnings growth and positive momentum. The IC holds a
slightly cautious view of U.S. equity, based on the belief more attractive opportunities exist outside the United States. Overall, the IC holds a slightly cautious view of equity, based on extended price-to-earnings valuations in the U.S. large-cap space.

FIXED INCOME
The U.S. Federal Reserve raised its fed funds rate by 0.25% in June, the fourth such increase dating to December 2015, to reach a target range of 1.00% to 1.25%. In theory, when interest rates rise, bond prices fall. And while short-term rates did increase, intermediate and long-term rates actually fell. Core fixed income – low-risk bonds such as those issued by the U.S. Treasury, municipalities or companies with high credit ratings – returned 1.45% for the quarter, as measured by the Bloomberg Barclays U.S. Aggregate Bond index. This asset class likely benefited from soft inflation, which could be attributed to lower oil prices and sluggish wage growth, despite low unemployment.

Freedom Portfolio Positioning
The AMS IC holds a slightly unfavorable view of fixed income, but likes its potential to provide insulation during an equity downturn. As fixed income yields rise, it will become a more attractive option for managing portfolio volatility.

ALTERNATIVES
With the equity and bond markets posting positive returns for the quarter, alternative investments produced mixed results. Alternatives returned 0.62%, as measured by the U.S. Fund Multialternative peer group. The AMS IC maintains a slightly favorable view of alternatives for their potential to mitigate risk during an equity downturn.
Further information on the funds selected for the Freedom portfolios is available by prospectus, which can be obtained through your financial advisor. Investors should carefully consider the investment objectives, risks, charges and expenses of mutual funds and exchange-traded funds before investing. All investments are subject to risk. The prospectus contains this and other information about the funds and should be read carefully before investing.

Indices and peer groups are not available for direct investment. Any investor who attempts to mimic the performance of an index or peer group would incur fees and expenses that would reduce returns. All investing involves risk. Asset allocation and diversification does not ensure a profit or protect against a loss. Dividends are not guaranteed and a company’s future ability to pay dividends may be limited.

RISK: It is important to review the investment objectives, risk tolerance, tax objectives and liquidity needs before choosing an investment style or manager. All investments carry a certain degree of risk and no one particular investment style or manager is suitable for all types of investors, you may incur a profit or a loss.

- Fixed-income securities (or “bonds”) are exposed to various risks including but not limited to credit (risk of default or principal and interest payments), market and liquidity, interest rate, reinvestment, legislative (changes to the tax code), and call risks.
- There is an inverse relationship between interest rate movements and fixed income prices. Generally, when interest rates rise, fixed income prices fall and when interest rates fall, fixed income prices generally rise. Short-term bonds with maturities of three years or less will generally have lower yields than long term bonds which are more susceptible to interest rate risk.
- Callable bonds generally offer a higher yield than non-callable bonds as they have the option to call the bonds and repay the principal prior to maturity. Issuers will generally be inclined to initiate a call if interest rates have declined since the bonds were first issued, as they can reissue new bonds at a lower interest rate. Investors will then be positioned to reinvest return on principal in a declining interest rate environment, thus receiving a lower yield going forward.
- Credit risk includes the creditworthiness of the issuer or insurer, and possible prepayments of principal and interest. Bonds may receive credit ratings from a number of agencies however, Standard & Poor's ratings range from AAA to D, with any bond with a rating BBB or higher considered to be investment grade. Securities rated below investment grade generally provide a higher yield but carry a higher risk of default which could result on a loss of the principal investment. Because high-yield bonds have greater credit and default risk they may not be appropriate for all investors. While bonds rated investment grade have

**FINAL THOUGHTS**

Many factors have the potential to influence the markets in the coming months, including U.S. federal policy initiatives affecting economic growth, the Federal Reserve’s commitment to interest-rate normalization and debt reduction, and the United Kingdom’s withdrawal from the European Union. Such uncertainties affirm the AMS IC’s diligent approach to asset allocation and diversification for their potential to mitigate downside risk in Freedom portfolios.
lower credit and default risk, there is no guarantee securing the principal investment.

- Investors should consider the Yield to Worst (YTW) of a bond or bond portfolio versus the Current Yield as the YTW is the lowest potential yield that can be received without default. YTW takes into account any bonds that could be called prior to maturity.

- Securities issued by certain U.S. government-related organizations are not backed by the full faith and credit of the U.S. government and therefore no assurance can be given that the U.S. government will provide financial backing should an issue default.

- Please note these portfolios may be subject to state, local, and/or alternative minimum taxes. You should discuss any tax or legal matters with the appropriate professional.

- Investing in emerging markets can be riskier than investing in well-established foreign markets. Emerging and developing markets may be less liquid and more volatile because they tend to reflect economic structures that are generally less diverse and mature and political systems that may be less stable than those in more developed countries.

- Investing in small-cap stocks generally involves greater risks, and therefore, may not be appropriate for every investor. Stocks of smaller or newer or mid-sized companies may be more likely to realize more substantial growth as well as suffer more significant losses than larger or more established issuers.

- Commodities trading is generally considered speculative because of the significant potential for investment loss. Among the factors that could affect the value of the fund's investments in commodities are cyclical economic conditions, sudden political events, changes in sectors affecting a particular industry or commodity, and adverse international monetary policies. Markets for precious metals and other commodities are likely to be volatile and there may be sharp price fluctuations even during periods when prices overall are rising.

- Specific sector investing such as real estate can be subject to different and greater risks than more diversified investments. Declines in the value of real estate, economic conditions, property taxes, tax laws and interest rates all present potential risks to real estate investments.

- Some accounts may invest in Master Limited Partnership ("MLP") units, which may result in unique tax treatment. MLPs may not be appropriate for ERISA or IRA accounts, and cause K-1 tax treatment. Please consult your tax adviser for additional information regarding the tax implications associated with MLP investments.

- Alternative investments are generally considered speculative in nature and may involve a high degree of risk, particularly if concentrating investments in one or few alternative investments. These risks are potentially greater and substantially different than those associated with traditional equity or fixed income investments. The investment strategies used by certain Funds may require a substantial use of leverage. The investment strategies employed and associated risks are more fully disclosed in each Fund’s prospectus, which is available from your financial advisor.

- Changes in the value of a hedging instrument may not match those of the investment being hedged.

- These portfolios may be subject to international, small-cap and sector-focus exposures as well. Accounts may have over weighted sector and issuer positions, and may result in greater volatility and risk.

- Companies in the technology industry are subject to fierce competition, and their products and services may be subject to rapid obsolescence.

INDEX AND PEER GROUP DESCRIPTIONS: These indices and peer groups are not available for direct investment. Any product which attempts to mimic the performance will incur expenses such as management fees and transaction costs that reduce returns.

Bloomberg Barclays U.S. Aggregate Bond Index (U.S. Fixed Income): This index includes investment grade U.S. Government bonds, corporate bonds, mortgage pass-through securities and asset-backed securities that are publicly offered for sale in the United States. The securities in the index must have at least one year remaining to maturity.

Bloomberg Barclays Global Aggregate Ex U.S. Bond TR USD (International Fixed Income): A measure of global investment grade debt from twenty-four different local currency markets. This multi-currency benchmark includes fixed-rate treasury, government-related, corporate and securitized bonds from both developed and emerging markets issuers.

Bloomberg Barclays U.S. High Yield - 2% Issuer Cap (U.S. High Yield): The index is the 2% Issuer Cap component of the U.S Corporate High Yield Index.

Bloomberg Commodity TR USD (Commodities): This index is composed of futures contracts and reflects the returns on a fully collateralized investment in the BCOM. This combines the returns of the BCOM with the returns on cash collateral invested in 13 week (3 Month) U.S. Treasury Bills.

Bloomberg Barclays Municipal TR USD (U.S. Municipal Bonds): A market-value-weighted index for the long-term tax-exempt bond market. To be included in the index, bonds must have a minimum credit rating of Baa. They must have an outstanding par value of at least $7 million and be issued as part of a transaction of at least $75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date.

FTSE/NAREIT Developed Index (Global Real Estate): This Index is designed to measure the stock performance of companies engaged in specific real estate activities of the North American, European and Asian real estate markets. Relevant real estate activities are defined as the ownership, trading and development of income-producing real estate.

JPM EMBI Global Diversified TR USD (Emerging Market Fixed Income): This index is an unmanaged, market-capitalization weighted, total-return index tracking the traded market for U.S.-dollar-denominated Brady bonds, Eurobonds, traded loans, and local market debt instruments issued by sovereign and quasi-sovereign entities.

MSCI EAFE Index (International Large Cap): A free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. & Canada. It consists of the following 22 developed market country indices: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom.

MSCI Emerging Market Index (Emerging Markets Equities): A free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. As of June 2009 the MSCI Emerging Markets Index consisted of the following 22 emerging market country indices: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Israel, Korea, Malaysia, Mexico, Morocco, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey.

MSCI EM NR USD (Emerging Markets Large Cap): This Index is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. The MSCI Emerging Markets Index consists of the following 23 emerging market country indexes: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Peru, Philippines, Poland, Qatar, Russia, South Africa, Taiwan, Thailand, Turkey* and United Arab Emirates. The MSCI EM NR USD takes only the large cap returns into account.
MSCI EM Small NR USD (Emerging Markets Small Cap): This Index is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. The MSCI Emerging Markets Index consists of the following 23 emerging market country indexes: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Peru, Philippines, Poland, Qatar, Russia, South Africa, Taiwan, Thailand, Turkey* and United Arab Emirates. The MSCI EM NR USD takes only the small cap returns into account.

Morningstar US OE Multialternative (Multialternative): These funds will use a combination of alternative strategies such as taking long and short positions in equity and debt, trading futures, or using convertible arbitrage, among others. Funds in this category have a majority of their assets exposed to alternative strategies and include both funds with static allocations to alternative strategies and funds tactically allocating among alternative strategies and asset classes.

Morningstar US OE Nontraditional Bond (Nontraditional): The category is meant as a home for funds that pursue strategies that diverge in some way from conventional practice in the bond-fund universe. The two most prominent flavors of funds in this new category typically describe themselves as pursuing either unconstrained or absolute return strategies. Funds in the unconstrained camp typically highlight their broad mandates to invest heavily across a wide spectrum of sectors and their ability to take their durations (a measure of interest-rate sensitivity) down to zero, or even negative. Absolute-return-focused funds usually emphasize their intent to generate positive returns and avoid losses, regardless of the market environment.

Morningstar US OE Managed Futures (Managed Futures): These funds typically take long and short positions in futures options, swaps, and foreign exchange contracts, both listed and over-the-counter, based on market trends or momentum. A majority of these funds follow trend-following, price-momentum strategies. Other strategies included in this category are systematic mean-reversion, discretionary global macro strategies, commodity index tracking, and other futures strategies. More than 60% of these funds' exposure is invested through derivative securities.

Morningstar US OE Long-Short Equity (Long/Short Equity): This category’s constituents take both long and short positions in equities and related derivatives with the intention of hedging against the downside.

Morningstar US OE Market Neutral (Market Neutral): These are funds that attempt to eliminate the risks of the market by holding 50% of assets in long positions in stocks and 50% of assets in short positions. Funds in this group match the characteristics of their long and short portfolios, keeping factors such as P/E ratios and industry exposure similar. Stock picking, rather than broad market moves, should drive a market-neutral fund’s performance.

Russell 2500 (U.S. Small to Mid Cap): A broad index featuring 2,500 stocks that cover the small and mid-cap market capitalizations. The Russell 2500 is a market cap weighted index that includes the smallest 2,500 companies covered in the Russell 3000 universe of United States-based listed equities.

Russell 3000 Index: Measures the performance of the largest 3000 U.S. companies representing approximately 98% of the investable U.S. equity market. The Russell 3000 Index is constructed to provide a comprehensive, unbiased, and stable barometer of the broad market and is completely reconstituted annually to ensure new and growing equities are reflected.

Russell 2000 Index (U.S. Small Cap): Measures the performance of the small-cap segment of the U.S. equity universe. The Russell 2000 is a subset of the Russell 3000 Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. The Russell 2000 Index is constructed to provide a comprehensive and unbiased small-cap barometer and is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small-cap opportunity set.

Russell Mid Cap TR USD (U.S. Mid Cap): Measures the performance of those Russell Midcap companies with higher price-to-book ratios and higher forecasted growth values. The stocks are also members of the Russell 1000 Growth index.

S&P 500 Index (U.S. Large Cap): This index consists of 500 of the largest stocks in the U.S. stock market. A market value weighted index (stock price times number of shares outstanding after float adjustment), with each stock’s weight in the index proportionate to its market value.

S&P Developed Ex US Small TR USD (International Small Cap): Was formerly known as S&P/Citigroup EMI Growth World ex-U.S. Index. The S&P Developed ex-U.S. Small Cap Growth Index is a subset of the S&P Developed Broad Market Index. The Small Cap Index covers the lowest 15% of all publicly listed equities in the Broad Market Index within a given country with float-adjusted market values of U.S. $100 million or more and annual dollar value traded of at least U.S. $50 million in all included countries. S&P Developed ex-U.S. Small Cap Growth Index represents approximately 3,552 small-cap companies from the developed nations in North America, Europe, Africa/Middle East and Asia Pacific (excluding the United States) that exhibit strong growth characteristics.

TERMS & DEFINITIONS:

Dow Jones Industrial Average: The Dow Jones Industrial Average (DJIA) is a price-weighted average of 30 significant stocks traded on the New York Stock Exchange (NYSE) and the NASDAQ.

NASDAQ: The market capitalization-weighted index of approximately 3,000 common equities listed on the NASDAQ stock exchange. The types of securities in the index include American depositary receipts, common stocks, real estate investment trusts (REITs) and tracking stocks, as well as limited partnership interests.
